

Product Line Up

New models made a debut, employing HFC R410A.

With the comprehensive lineup of products, including the floor standing type and ceiling concealed type, it has been made easier for you to use them for offices, stores, factories, hotels and a variety of other applications.

APPLICATION

Example 2. Manufacturing plant

Requirements

Ducts cannot be installed in the ceiling with crane rails. High ceiling and heat generation from equipment need to be considered. ON/OFF control by external input (level-signal) is required in the system.

Solution

Cooling only floor standing series with plenum chamber.*1

External signal based start/stop control can be performed.*2

*1 For PFV-P200/250YM-A model, a plenum is embedded as standard accessory.

Example 3. Printing factory

Requirements

There is large heat generation from equipment and intake of outdoor air is favored.

Solution

Heat pump series Fresh air intake models.*1

Fresh air from outdoor supplied to the room reduces the total air-conditioning load in the room.

*1 Fresh air intake type indoor units supply pretreated outside air into the room. This type of units are not designed to handle internal thermal load. Use other types of air conditioning units that are capable of handling internal thermal load in combination with the Fresh Air Intake type units.

Example 4. Airport

Requirements

Air conditioning for spacious and high ceiling room. Easy maintenance even when people are in the room.

Solution

Floor standing series with plenum chamber.*1

 $^{\star}1$ For PFV-P200/250YM-A model, plenum is embedded as $\,$ standard accessories

Page 3 Page 3 Page 5 Pa

^{*2} Requires the remote ON/OFF adapter (PAC-SE55RA-E) and other parts (eg. Power supply of relay) need to be procured locally.

The New Cooling-only Series

High Energy Efficiency < New Compressor>

- •Use of inverter-based compressor that adopts DC brushless motor for increased energy saving and load-following capability.
- •Capable of covering up to 20 HP with a single compressor.
- •Improved partial-load characteristics achieved by the optimized scroll shape.
- •Reduced standby power consumption by heating the compressor instead of a crankcase heater. (16/20 HP)

■Comparison between inverter air conditioner and Temperatur non-inverter air conditioner

■Improved CSPF. SCOP performance

Optimized scroll shape (improved volumetric capacity ratio)

<ET control (Evaporating Temperature control)>

Reduced energy consumption in cooling by controlling the refrigerant temperature according to the operation load and raising Thermostal evaporating temperature.

Current control method

Evaporating temperature was kept constant.

Evaporating temperature is raised according to the operation load, decreasing compressor input power and increasing operation efficiency.

User Friendry Interface <Controller>

With the usage of MA controller (PAR-31MAAE), which is embedded at the Cooling only series. Use of LCD and back light for improved

The display of error history and the setting of night setback and demand control are made possible through the remote controller in pursuit of increased user conve-

Widen installation and application options

Simple Piping

Capable of covering up to 20 HP with a single module and a single compres-

Increased adaptation to local needs (floor standing type 16/20 HP)

In addition to the standard duct blowing, the plenum blowing and the rear suction are made selectable as optional.

The airflow rate and the static pressure may also be changed to meet the local needs (by the use of optional parts and locally procured parts).

Increase in the limit of piping length

Maximum piping length: 150 m (70 m for 8/10 HP)

Height difference between indoor and outdoor units is up to 50 m.

(16/20 HP; case with the outdoor unit installed higher) (30 m for 8/10 HP)

Compatibility to outdoor temperature of up to 52°C **

Capable of running cooling operations in the outdoor temperature of up to 52°C.

Centralized control enabled by M-NET control

Since the new Cooling only series uses M-NET, the design of control is simple and easy.

Through the centralized controller, the centralized control is made possible under the mixed use with VRF CITY MULTI series.

Meeting the demand control needs

100/75/50/0% fixed capacity operation possible by external signals.

Meets a variety of user needs, such as the demand control for restricting the power demand.

Other new functions

- External signal-based start/stop control function (by the use of optional parts)
- Fan ON/OFF control signals can be taken to the outside.

^{*1 :} Any continuous operation over 46°C may require an increased frequency of maintenance.

What is the new energy-conservation standards CSPF?

○ COP (Energy consumption efficiency)

Characteristics of COP

COP is defined as the ratio of cooling/heating capacity to 1 kW of electrical power consumption at the rated cooling/heating operation.

The COP in cooling and heating is calculated based on the measurements taken at the outside temperature of 35°C and 7°C respectively.

COP is an energy-conservation index that is calculated under very limited conditions in the year.

I COP calculation method

COP = Rated capacity (kW)

Rated power consumption (kW)

Annual outside temperature occurrence frequency (in Tokyo)

CSPF (Cooling Seasonal Performance Factor)

Characteristics of CSPF

CSPF is calculated based not only on the measurements taken during rated cooling operation, but also on those taken during intermediate cooling operation. The type of building usage and variables that change during different operating seasons are also considered in the calculation of CSPF to reflect actual usage conditions.

CSPF calculation method

CSPF = Capacity output during cooling season (kWh)

Power consumption during cooling season (kWh)

Outside temperature occurrence frequency used to calculate CSPF (in Kagoshima)

► Cooling season

Calculation conditions for CSPF

		Air conditioners for stores and office buildings	CITY MULTI and PAC air conditioners				
Standard		JRA4048:2006					
Area		Kagoshima (Japan)		Kagoshima (Japan)		Kagoshima (Japan)	
Building usage		Detached store	Office				
Operating season	Cooling	May 23-Oct. 10	Apr. 16-Nov. 8				
Operating season	Heating	Nov. 21-Apr. 11	Dec. 14-Mar. 23				
Usage period		8:00-21:00	8:00-20:00				

NEW Cooling only series

Cooling only series [LINE UP]

■Floor standing type

Features

- · Easy installation and maintenance
- Suitable for use in areas where duct installation is not possible (i.e., high ceiling or ceiling with crane rails)
- · Satisfies large capacity air conditioning needs
- · Adjustable air flow and static pressure

Line up

Wide temperature range

■ Ceiling concealed type

Features

- Flexibly accommodates various types of duct designs
- · Installable when no floor space is available
- · Suitable for use in areas where air flow from floor-standing models would be interrupted by the equipment in the space
- Suitable for use in facilities such as food manufacturing plants where floor-standing models are not suitable because of cleaning requirements

Line up

Wide temperature range

Note 1. Cooling capacity indicates the value at operation under the following conditions.

Indoor: 27°CDB / 19.5°CWB, Outdoor: 35°CDB

2. <Reference cooling capacity> Indicates the value at operation under the following conditions.

Indoor: 27°CDB / 19°CWB, Outdoor: 35°CDB

3. The sound pressure level is measured in an anechoic room.

4. Long period operation in a high temperature and humidity atmosphere (dew point of 23°C or more) may cause condensation to form in the indoor unit.

Note 1. Cooling capacity indicates the value at operation under the following conditions.

Indoor: 27°CDB / 19.5°CWB, Outdoor: 35°CDB

2. <Reference cooling capacity> Indicates the value at operation under the following conditions.

Indoor: 27°CDB / 19°CWB, Outdoor: 35°CDB

3. The sound pressure level is measured in an anechoic room.

4. Long period operation in a high temperature and humidity atmosphere (dew point of 23°C or more) may cause condensation to form in the indoor unit.

Wired MA remote controller PAR-31MAAE

Dimensions: 120(W) x 120(H) x 19(D) mm : 4-3/4(W) x 4-3/4(H) x 3/4(D) in.

Example of system configuration

*When a PAR-31MAAE is connected to a group, no other MA remote controllers can be connected to the same group.

 Temperature will be displayed either in Centigrade in 0.5or 1-degree increments, or in Fahrenheit, depending on the indoor unit model and the display mode setting on the remote controller.

• Backlit LCD (Liquid Crystal Display)

Large, easy-to-see display

Full-dot LCD display with large characters for easy viewing Contrast also adjustable

Night Setback

To prevent indoor dew or excessive temperature rise, this control starts cooling operation when the control object group is stopped and the room temperature rises above the preset upper limit temperature.

Simple button arrangement

• Large, easy-to-press buttons

Buttons are arranged according to usage to allow for intuitive navigation.

Frequently used buttons are larger than other buttons to prevent unintended pressing of other buttons.

Functions

	: Each group	∴ Not ava	ilable
Item	Description	Operations	Display
ON/OFF	Switches between ON and OFF.	0	0
Operation mode switching	Switches among Cool/Fan.	0	0
Room temp. setting	The temperature can be set within the following range. Cool : 19°C - 30°C / 67°F - 87°F *Set temperature range varies depending on the model.	0	0
Ventilation equipment control	Interlocked setting and interlocked operation setting with the CITY MULTI LOSSNAY units can be made. The Stop/Low/High settings of the ventilation equipment can be controlled.	0	0
Error information	When an error occurs, an error code and the unit address appear. Air conditioning unit model, serial number, and contact number can be set to appear when an error occurs. (The information above needs to be entered in advance.) * An error code may not appear depending on the error.	_	0
Timer	ON/OFF timer Turns ON and OFF daily at a set time. • Time can be set in 5-minute increments. • It is also possible to set the ON time only or the OFF time only. Auto-OFF timer Turns off the unit after a certain period of operation. • Operation time can be set to a value from 30 to 240 minutes in 10-minute increments.	0	0
Allows/disallows local operation	The following operation can be prohibited by making certain settings on the centralized controller: ON/OFF, operation mode setting, temperature setting, fan speed, air direction, and filter sign reset. * While an operation is prohibited, the operation icon lights up (only on the Main display in the "Full" mode).	х	0
Operation lock	The following operation can be prohibited respectively: ON/OFF, operation mode setting, temperature setting, and airflow direction setting.	0	0
Temperature range restriction	The room temperature range for each operation mode can be restricted.	0	0
Auto return	The units operate at the preset temperature after a designated period. (Time can be set to a value from 30 to 120 in 10-minute increments.) * Not valid when the temperature setting range is restricted.	0	0
Smooth Maintenance	Using the Stable Operation Control (fixed frequency) of the Smooth Maintenance function, the operating status of the inverter can be checked easily via the screen on the remote controller.	х	х

Heat pump series

Heat pump series

Heat pump series is a large capacity floor standing indoor unit with high air flow operation especially designed for various types of large spaced application. The unit is a one-to-one connection unit meaning one indoor is connected to one outdoor unit. The lineup consists of two models; standard model and fresh air intake model, selectable depending on usage.

Adaptable to various applications

With wide range of airflow and static pressure, and piping length up to 165m, Heat pump series can provide flexibility in design by adapting to various applications from shops, schools, and to factories.

	Air flow rate	External static pressure	
	m³/min	Pa	
PFAV-P250VM-E	90	30/90	
PFAV-P500VM-E	180	30/130	
PFAV-P750VM-E	260	100/310	
PFAV-P300VM-E-F	45	80	
PFAV-P600VM-E-F	90	110/170	
PFAV-P900VM-E-F	120	210/330	

Large capacity indoor unit

Heat pump series is a floor standing large capacity indoor unit, which reduces the piping and installation burdens, moreover makes maintenance easy.

OUTDOOR UNIT

Compact outdoor unit

Heat pump series can only be connected to PUHY-YHA outdoor units. YHA series offers small footprint and lightweight inversely to high heating capacity, which allows easy transportation and saves installation space.

High Reliability

Outdoor heat exchangers have been treated with an anti-corrosion coating ensuring higher resistance against salt damage or air pollution.

*Standard:Anti-corrosion Blue Fin treatment & copper tube. BS type (optional):salt-resistant cross fin & copper tube.

CONTROL

With the usage of MA controller (PAR-21MAA), which is embedded at the Heat pump series, following energy saving functions can be provided.

Auto-OFF timer

Automatically switches off based on presetting time. (Preset time can be 30min-4hours, per 30min)

Limiting set temperature range

By limiting lowest / highest temperature, it is possible to save energy when air conditioners are frequently used.

Temperature in this range is not selectable

Locking function

To sustain optimal temperature, and prevent operational errors, buttons can be locked to only ON/OFF control.

Page 15 Page 16

Heat pump series [SPECIFICATIONS]

■STANDARD model

Features

Highly energy efficient with easy installation and maintenance, the standard Heat pump series is suitable for working places where large capacity air conditioning is required.

Line up

Wide temperature range

By controlling the air volume of the outdoor unit fan, operation is available even when the outdoor temperature is -5°C for cooling and -20°C for heating.

*In heating operation, operation capacity may fall below the rated capacity in low outdoor temp. / indoor inlet temp. conditions.

■ FRESH AIR INTAKE model

Features

Fresh air intake model takes in fresh air from the outdoor suitable for application such as factories and laboratories where intake of indoor air is not favored.

Line up

Wide temperature range

Heating operation is available at -4°C Outdoor temperature making it adaptable for places with frequent heating requirements.

Installation information

1. General precautions

1-1. Usage

- The air-conditioning system described in this catalogue is designed for human comfort.
- ◆This product is not designed for preservation of food, animals, plants, precision equipment, or art objects. To prevent quality loss, do not use the product for purposes other than what it is designed for.
- ♦To reduce the risk of water leakage and electric shock, do not use the product for air-conditioning vehicles or vessels.

1-2. Installation environment

- ◆Do not install any unit other than the dedicated unit in a place where the voltage changes a lot, large amounts of mineral oil (e.g., cutting oil) are present, cooking oil may splash, or a large quantity of steam can be generated such as a kitchen.
- Do not install the unit in acidic or alkaline environment.
- ♦Installation should not be performed in the locations exposed to chlorine or other corrosive gases. Avoid near a sewer.
- ◆To reduce the risk of fire, do not install the unit in a place where flammable gas may be leaked or inflammable material is present.
- ◆This air conditioning unit has a built-in microcomputer. Take the noise effects into consideration when deciding the installation position. Especially in a place where antenna or electronic device are installed, it is recommended that the air conditioning unit be installed away from them.
- ♦Install the unit on a solid foundation according to the local safety measures against typhoons, wind gusts, and earthquakes to prevent the unit from being damaged, toppling over, and falling.

1-3. Unit characteristics

- ♦Heat pump efficiency depends on outdoor temperature. In the heating mode, performance drops as the outside air temperature drops. In cold climates, performance can be poor. Warm air would continue to be trapped near the ceiling and the floor level would continue to stay cold. In this case, heat pumps require a supplemental heating system or air circulator. Before purchasing them, consult your local distributor for selecting the unit and system.
- ♦When the outdoor temperature is low and the humidity is high, the heat exchanger on the outdoor unit side tends to collect frost, which reduces its heating performance. To remove the frost, Auto-defrost function will be activated and the heating mode will temporarily stop for 3-10 minutes. Heating mode will automatically resume upon completion of defrostprocess.
- •Air conditioner with a heat pump requires time to warm up the whole room after the heating operation begins, because the system circulates warm air in order to warm up the whole room.
- ♦The sound levels were obtained in an anechoic room. The sound levels during actual operation are usually higher than the simulated values due to ambient noise and echoes. Refer to the section on "SOUND LEVELS" for the measurement location.
- ◆Depending on the operation conditions, the unit generates noise caused by valve actuation, refrigerant flow, and pressure changes even when operating normally. Please consider to avoid location where quietness is required.
- ♦When the unit is started up for the first time within 12 hours after power on or after power failure, it performs initial startup operation (capacity control operation) to prevent damage to the compressor. The initial startup operation requires 90 minutes maximum to complete, depending on the operation load.

1-4. Relevant equipment

- ◆Use an earth leakage breaker (ELB) with medium sensitivity, and an activation speed of 0.1 second or less.
- ◆Consult your local distributor or a qualified technician when installing an earth leakage breaker.
- ♦If the unit is inverter type, select an earth leakage breaker for handling high harmonic waves and surges.
- ◆Leakage current is generated not only through the air conditioning unit but also through the power wires. Therefore, the leakage current of the main power supply is greater than the total leakage current of each unit. Take into consideration the capacity of the earth leakage breaker or leakage alarm when installing one at the main power supply. To measure the leakage current simply on site, use a measurement tool equipped with a filter, and clamp all the four power wires together. The leakage current measured on the ground wire may not accurate because the leakage current from other systems may be included to the measurement value.
- ◆Do not install a phase advancing capacitor on the unit connected to the same power system with an inverter type unit and its equipment.
- If a large current flows due to the product malfunctions or faulty wiring, both the earth leakage breaker on the product side and the upstream overcurrent breaker may trip almost at the same time. Separate the power system or coordinate all the breakers depending on the system's priority level.

1-5. Unit installation

- ♦Your local distributor or a qualified technician must read the Installation Manual that is provided with each unit carefully before performing installation work.
- ◆Consult your local distributor or a qualified technician when installing the unit. Improper installation by an unqualified person may result in water leakage, electric shock, or fire.
- ◆Ensure there is enough space around each unit.

1-6. Optional accessories

- •Only use accessories recommended by Mitsubishi Electric. Consult your local distributor or a qualified technician when installing them. Improper installation by an unqualified person may result in water leakage, electric leakage, system breakdown, or fire.
- •Some optional accessories may not be compatible with the air conditioning unit to be used or may not suitable for the installation conditions. Check the compatibility when considering any accessories.
- ◆Note that some optional accessories may affect the air conditioner's external form, appearance, weight, operating sound, and other characteristics.

1-7. Operation/Maintenance

- ◆Read the Instruction Book that is provided with each unit carefully prior to use.
- ◆Maintenance or cleaning of each unit may be risky and require expertise. Read the Instruction Book to ensure safety.
- Consult your local distributor or a qualified technician when special expertise is required such as when the indoor unit needs to be cleaned.

2. Precautions for Indoor unit

2-1. Operating environment

- ◆The refrigerant (R410A) used for air conditioner is non-toxic and nonflammable. However, if the refrigerant leaks, the oxygen level may drop to harmful levels. If the air conditioner is installed in a small room, measures must be taken to prevent the refrigerant concentration from exceeding the safety limit even if the refrigerant should leak.
- ♦If the units operate in the cooling mode at the humidity above 80%, condensation may collect and drip from the indoor units.

Page 19 Page 20

Installation information

2-2. Unit characteristics

- ♦The return air temperature display on the remote controller may differ from the ones on the other thermometers.
- ♦The clock on the remote controller may be displayed with a time lag of approximately one minute every month.
- ♦The temperature using a built-in temperature sensor on the remote controller may differ from the actual room temperature due to the effect of the wall temperature.
- ♦Use a built-in thermostat on the remote controller or a separately-sold thermostat when indoor units installed on or in the ceiling operate the automatic cooling/heating switchover.
- ◆The room temperature may rise drastically due to Thermo OFF in the places where the air conditioning load is large such as computer rooms.
- ♦Be sure to use a regular filter. If an irregular filter is installed, the unit may not operate properly, and the operation noise may increase.
- ♦The room temperature may rise over the preset temperature in the environment where the heating air conditioning load is small.

2-3. Unit installation

- ♦When a field-supplied external thermistor is installed or when a device for the demand control is used, abnormal stop of the unit or damage of the electromagnetic contactor may occur. Consult your local distributor for details.
- Operating fresh air intake on the indoor unit may increase the sound pressure level.

3. Precautions for Outdoor unit

3-1. Installation environment

- ♦Outdoor unit with salt-resistant specification is recommended to use in a place where it is subject to salt air.
- ◆Even when the unit with salt-resistant specification is used, it is not completely protected against corrosion. Be sure to follow the directions or precautions described in Instructions Book and Installation Manual for installation and maintenance. The salt-resistant specification is referred to the guidelines published by JRAIA (JRA9002).
- ♦Install the unit in a place where the flow of discharge air is not obstructed. If not, the short-cycling of discharge air may occur.
- ♦Provide proper drainage around the unit base, because the condensation may collect and drip from the outdoor units.
- Provide water-proof protection to the floor when installing the units on the rooftop.
- ♦In a region where snowfall is expected, install the unit so that the outlet faces away from the direction of the wind, and install a snow guard to protect the unit from snow. Install the unit on a base approximately 50 cm higher than the expected snowfall. Close the openings for pipes and wiring, because the ingress of water and small animals may cause equipment damage. If SUS snow guard is used, refer to the Installation Manual that comes with the snow guard and take caution for the installation to avoid the risk of corrosion.
- ♦When the unit is expected to operate continuously for a long period of time at outside air temperatures of below 0°C, take appropriate measures, such as the use of a unit base heater, to prevent icing on the unit base.
- ♦Install the snow guard so that the outlet/inlet faces away from the direction of the wind.
- ♦When the snow accumulates approximately 50 cm or more on the snow guard, remove the snow from the guard. Install a roof that is strong enough to withstand snow loads in a place where snow accumulates.
- ◆Provide proper protection around the outdoor units in places such as schools to avoid the risk of injury.

3-2. Unit characteristics

♦When the Thermo ON and OFF is frequently repeated on the indoor unit, the operation status of outdoor units may become unstable.

3-3. Relevant equipment

◆Provide grounding in accordance with the local regulations.

4. Precautions for Control-related items

4-1. Product specification

- ◆To introduce the MELANS system, a consultation with us is required in advance. Especially to introduce the electricity charge apportioning function or energy-save function, further detailed consultation is required. Consult your local distributor for details.
- ◆Billing calculation for AG-150A, GB-50ADA, TG-2000A, or the billing calculation unit is unique and based on our original method. It is not based on the metering method, and do not use it for official business purposes. It is not the method that the amount of electric power consumption (input) by air conditioner is calculated. Note that the electric power consumption by air conditioner is apportioned by using the ratio corresponding to the operation status (output) for each air conditioner (indoor unit) in this method.
- In the apportioned billing function for AG-150A and GB-50ADA, use separate watthour meters for A-control units, K-control units, and packaged air conditioner for City Multi air conditioners. It is recommended to use an individual watthour meter for the large-capacity indoor unit (with two or more addresses).
- ♦When using the peak cut function on the AG-150A or GB-50ADA, note that the control is performed once every minute and it takes time to obtain the effect of the control. Take appropriate measures such as lowering the criterion value. Power consumption may exceed the limits if AG-150A or GB-50ADA malfunctions or stops. Provide a back-up remedy as necessary.
- ◆The controllers cannot operate while the indoor unit is OFF. (No error) Turn ON the power to the indoor unit when operating the controllers.
- •When using the interlocked control function on the AG-150A, GB-50ADA, PAC-YG66DCA, or PAC-YG63MCA, do not use it for the control for the fire prevention or security. (This function should never be used in the way that would put people's lives at risk.) Provide any methods or circuit that allow ON/OFF operation using an external switch in case of failure.

4-2. Installation environment

- ◆The surge protection for the transmission line may be required in areas where lightning strikes frequently occur.
- ◆A receiver for a wireless remote controller may not work properly due to the effect of general lighting. Leave a space of at least 1 m between the general lighting and receiver.
- ♦Install the wired remote controller (switch box) to the place where the following conditions are met.
 - ♦Where installation surface is flat
 - ♦Where the remote controller can detect an accurate room temperature

The temperature sensors that detect a room temperature are installed both on the remote controller and indoor unit. When a room temperature is detected using the sensor on the remote controller, the main remote controller is used to detect a room temperature. In this case, follow the instructions below.

- ◆Install the controller in a place where it is not subject to the heat source.

 (If the remote controller faces direct sunlight or supply air flow direction, the remote controller cannot detect an accurate room temperature.)
- Install the controller in a place where an average room temperature can be detected.
- Install the controller in a place where no other wires are present around the temperature sensor.

 (If other wires are present, the remote controller cannot detect an accurate room temperature.)
- ♦To prevent unauthorized access, always use a security device such as a VPN router when connecting AG-150A, GB-50ADA, or TG-2000A to the Internet.

Page 21 Page 22

for a greener tomorrow

Eco Changes is the Mitsubishi Electric Group's environmental statement, and expresses the Group's stance on environmental management. Through a wide range of businesses, we are helping contribute to the realization of a sustainable society.

FM33568 / ISO 9001;2008

The Air Conditioning & Refrigeration Systems Works acquired ISO 9001 certification under Series 9000 of the International Standard Organization (ISO) based on a review of Quality management for the production of refrigeration and air conditioning equipment.

ISO Authorization System

The ISO 9000 series is a plant authorization system relating to quality management as stipulated by the ISO. ISO 9001 certifies quality management based on the "design, development, production, installation and auxiliary services" for products built at an authorized plant.

The Air Conditioning & Refrigeration Systems Works acquired environmental management system standard ISO 14001 certification.

The ISO 14000 series is a set of standards applying to environmental protection set by the International Standard Organization (ISO).

Registered on March 10, 1998.

△ Warning

- Do not use refrigerant other than the type indicated in the manuals provided with the unit and on the nameplate.
- Doing so may cause the unit or pipes to burst, or result in explosion or fire during use, during repair, or at the time of disposal of the unit
- It may also be in violation of applicable laws.
- MITSUBISHI ELECTRIC CORPORATION cannot be held responsible for malfunctions or accidents resulting from the use of the wrong type of refrigerant.

MITSUBISHI ELECTRIC CORPORATION
